OBJECTIVE

AI Engineer with hands-on experience in building scalable enterprise AI applications using open-source LLMs, seeking to further deepen expertise in machine learning and contribute to impactful AI solutions.

EDUCATION

Audisankara College Of Engineering And Technology

Bachelor of Technology in Artificial Intelligence 8.48 CGPA

Nellore , India

Sep. 2022 – April 2025

Audisankara College Of Engineering And Technology

Electronics and Communication Engineering

Nellore, India

Aug. 2019 – July 2022

EXPERIENCE

AI Engineer

ReNote Ai

Jan 2025 – Present

Hyderabad, India

- Leading development of enterprise-grade AI applications using open-source large language models (LLMs).
- Collaborating with cross-functional teams to implement end-to-end AI solutions in Python and PyTorch.
- Architected scalable backend systems for AI inference, leveraging tools like MLflow and Docker.
- Mentored junior interns and contributed to internal AI tooling and model evaluation frameworks.

Machine Learning Intern

CodeAlpha

July 2024 – Aug. 2024

Remote, India

- Implemented machine learning algorithms to analyze large datasets and extract meaningful insights.
- Gained extensive hands-on experience in Python programming and database management systems.
- Improved the efficiency of data processing pipelines and enhanced overall system performance.

PROJECTS

AI Strategy Bot (StratBot) | Tech Stack: FastAPI, Python backend, Groq API for LLM inference, HTML/CSS/JS frontend

- Description: Built an autonomous AI agent—StratBot—that ingests company info (e.g., from Wikipedia), reasons like an MBA consultant, and outputs five custom AI/ML strategy recommendations with citations.
- Impact: Demonstrated ability to build self-sufficient AI agents, including UX design and integration of LLMs for strategic decision-making.

MailSnap | Tech Stack: FastAPI, Gmail API, OAuth2, GROQ AI, Jetpack

- Description: Weekend hack project: enterprise-ready AI email summarizer—reads a user's latest 5 unread Gmail emails and provides two-line TL;DR summaries via a clean web interface.
- Impact: Showcases rapid prototyping ability with real-world APIs and LLM integration, balancing privacy and usability.

Tumor Cell Detection in MRI Images | PyTorch, CNN, Colab, Kaggle, ML Algorithms

- Developed a machine learning model to detect tumor cells in MRI images using Convolutional Neural Networks (CNN).
- Trained the model using labeled MRI datasets available on Kaggle and implemented it on Google Colab.
- Applied machine learning algorithms to preprocess and augment the image data to improve model accuracy.
- Utilized the PyTorch framework to design, train, and evaluate the model, achieving high accuracy in tumor detection.

HACKATHONS & RECOGNITION

- **4× Hackathon Winner:** Secured victories in four major hackathons, including two national-level events.
- **Top10 – NASA Space Apps Challenge:** Ranked among the top 10 teams globally for AI-based space tech solutions.
- **Smart India Hackathon 2024 Finalist:** Led Team *BroCode* to ISRO finals; built a lunar image enhancement model for frozen water detection.
- **Media Feature – Eenadu Newspaper:** Recognized for AI innovations during SIH 2024; featured in one of India's largest Telugu news outlets.

TECHNICAL SKILLS

Programming Languages: Python, Java, SQL, HTML/CSS

Generative AI & NLP: Large Language Models (LLMs), Prompt Engineering, Fine-tuning, LangChain, RAG (Retrieval-Augmented Generation), OpenAI API, Hugging Face

ML Deep Learning: PyTorch, Scikit-learn, Transformers, Transfer Learning, MLflow

Frameworks & Tools: FastAPI, Docker, Git, Google Colab, VS Code, GitHub Actions

Libraries: NumPy, Pandas, Matplotlib, Seaborn
